

ABSTRACT

A floor plank, especially a multi-layer, pressed laminate panel, comprises a decorative paper (12) in the top walked-on layer, which is impregnated with an aminoplastic resin or similar. Particles of an electrically conducting material are applied to the back of the decorative paper (12).

In a method for manufacturing a floor plank, in particular a multi-layer laminate panel pressed together in one operation, which is provided with a decorative paper (12) as the top walked-on layer, which is impregnated with an aminoplastic resin, particles of an electrically conducting material are applied to the back of the decorative paper (12) impregnated with a melamine resin.
